

Roll Number: _____

Thapar University, Patiala
Department of Computer Science and Engineering

Special Auxiliary Exam	Course Code: UCS406
B. E. COE (Second Year): Semester-IV	Course Name: Data Structures and ALgorithms
August 23, 2017	Time: 17.30 – 20.30 Hrs
Time: 3 Hours, M. Marks: 100	Name of Faculty: Tarunpreet Bhatia

Note: All questions are compulsory and attempt all parts of a question at one place.
Assume missing data, if any, suitably.

Q.1	Explain Binary Search Tree and various operations for BST.	(15)																														
Q.2	Explain divide and conquer approach and discuss it with the Merge sort on a given array with 9 elements as 77,33,44,11,88,22,66,55,99	(10)																														
Q.3	Consider a hash table of size $M = 10$. If items with keys $k = 89; 18; 49; 58; 69; 64; 70; 45; 4$ are inserted in that order, draw the resulting hash table if we resolve collisions using Linear probing with $h(k) = k \bmod 10$.	(10)																														
Q.4	Explain with example how will you add an element Q and delete an element Q, assuming the queue is represented as circular queue.	(10)																														
Q.5	Indicate the order in which Kruskal's algorithm would include edges in constructing a minimum spanning tree for the following graph:	(10)																														
	<pre> graph LR B --- C[5] B --- D[7] C --- D[2] C --- F[2] D --- E[4] E --- G[1] F --- H[3] G --- H[6] </pre>																															
Q.6	Apply Dijkstra's algorithm on the following weighted graph to find shortest path of all the nodes from source node 'NY'. <pre> graph LR NY((NY)) -- 5 --> Boston((Boston)) NY((NY)) -- 3 --> CK((CK)) Boston((Boston)) -- 2 --> CK((CK)) Boston((Boston)) -- 6 --> LA((LA)) CK((CK)) -- 1 --> Boston((Boston)) CK((CK)) -- 4 --> LA((LA)) CK((CK)) -- 4 --> WN((WN)) LA((LA)) -- 2 --> WN((WN)) </pre>	(15)																														
Q.7	You are given $n=9$. The execution time of each job is one unit of time. We can execute one job at a time. (i) Each job J_i has profit P_i and deadline D_i (ii) You will get P_i if you complete J_i with Deadline D_i <table border="1"> <thead> <tr> <th>Jobs</th> <th>J1</th> <th>J2</th> <th>J3</th> <th>J4</th> <th>J5</th> <th>J6</th> <th>J7</th> <th>J8</th> <th>J9</th> </tr> </thead> <tbody> <tr> <td>Profit</td> <td>15</td> <td>20</td> <td>30</td> <td>18</td> <td>18</td> <td>10</td> <td>23</td> <td>16</td> <td>25</td> </tr> <tr> <td>Deadline</td> <td>7</td> <td>2</td> <td>5</td> <td>3</td> <td>4</td> <td>5</td> <td>2</td> <td>7</td> <td>3</td> </tr> </tbody> </table> Find out the jobs which are left out and What is maximum profit we are getting?	Jobs	J1	J2	J3	J4	J5	J6	J7	J8	J9	Profit	15	20	30	18	18	10	23	16	25	Deadline	7	2	5	3	4	5	2	7	3	(10)
Jobs	J1	J2	J3	J4	J5	J6	J7	J8	J9																							
Profit	15	20	30	18	18	10	23	16	25																							
Deadline	7	2	5	3	4	5	2	7	3																							

(4*5=20)

Q.8

Differentiate between:

- (i) DFS and BFS
- (ii) Stack and Queue
- (iii) Graph and Tree
- (iv) Greedy and Dynamic Programming
